Year 2000 Compliance

Introduction

MQP Electronics Ltd have tested all their programmer hardware, software, firmware and associated PC application software for compliance with the British Standards Institute specification (DISC-PD2000-1).

The rules for Year 2000 conformity

The British Standards Institution has defined "Year 2000 Conformity" [DISC PD2000-1] in terms of four rules which ensure that "neither performance nor functionality is affected by dates prior to, during and after the Year 2000".

- **Rule 1:** No value for current date will cause any interruption in operation;
- **Rule 2:** Date-based functionality must behave consistently for dates prior to, during and after Year 2000;
- **Rule 3:** In all interfaces and data storage, the century in any date must be specified either explicitly, or by unambiguous algorithms or inferencing rules;
- **Rule 4:** Year 2000 must be recognised as a leap year.

Statement of Compliance

All the hardware, software, firmware or PC application software contained in, or associated with, the following products fully meet the above requirements:

- Pin-Master 48
- System 2000 (including MP2, MP3, MP4, MP5, MP6 and MP9)
- Model 200
- Model 170

The only assumption is that the PC connected to the programmer is also year 2000 compliant.
